

IN THE ABSTRACT

Please replace the abstract with the following new abstract:

According to the invention, the method of manufacturing a module component comprises an inserting step of inserting a chip component in a first molding die; a primary molding step of filling the first molding die with resin with a first end electrode of the chip component exposed; a peeling step of peeling the first molding die at a side of inserting the chip component; a secondary molding step of filling a second molding die with resin with a second end electrode of the chip component; and a forming step of forming a circuit wiring on one side or both sides of a molded element molded with resin, wherein the chip component is disposed according to a specified rule, and the chip component is molded with the resin.
